

Condence concept: CHP Facility

CONDENCE

- General on remote on-line monitoring
- Benefits for CHP facility
- Monitored components
- Technical setup & Price examples

General Benefits in practice

Extend the monitoring plan beyond the turbine to cover all critical equipment

Increase maintenance accuracy & quality

- Start monitoring with relevant **accuracy** to maximise the **time to plan and react**

- Replace manual snapshots of machine condition with **continuous and accurate results**

Operational Excellence

- Skilled personnel can focus to more demanding tasks
- Reveal which assets / areas need your attention
- Perform actions in optimal time and minimised cost

Examples of notifications & using Condence as decision support

- Know the status of all bearings in the facility
- Get notified instantly if blowers/fans require blade cleaning
- Order alignment for machinery when it is actually needed
- Get notified if motors are running hot

Condence in CHP Facility

Manage several sites from one view

Improved control on digital asset management

Remote services to reduce operational costs

Early detection and planning to avoid collateral damages and costs

Structured methods & data to improve O&M to maximize asset life

Structured data for post processing and optimization O&M

CONDENCE

Remote center view to monitor, analyze and decide actions on-line

On-The-GO

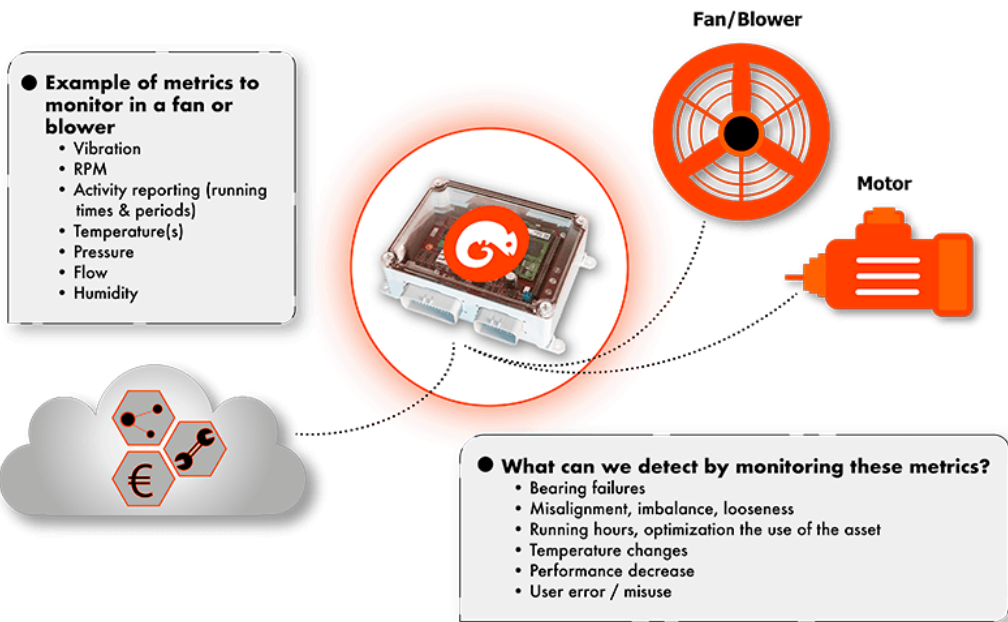

Shared access to external service providers and on-site personnel

Monitoring targets in CHP facility

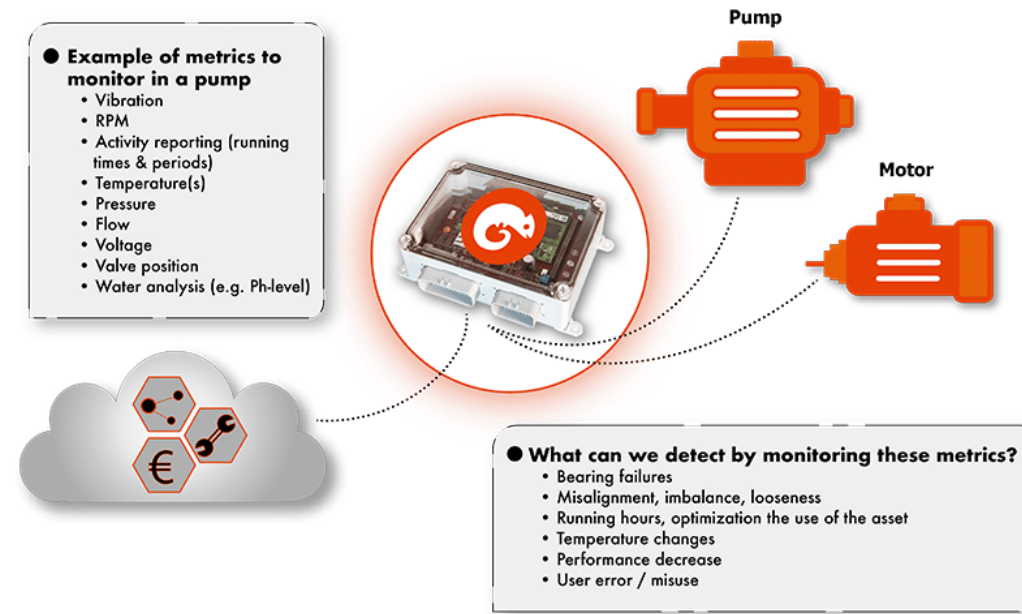

Monitoring concepts – Common assets

Fans/Blowers: Flue gas, Primary & Secondary

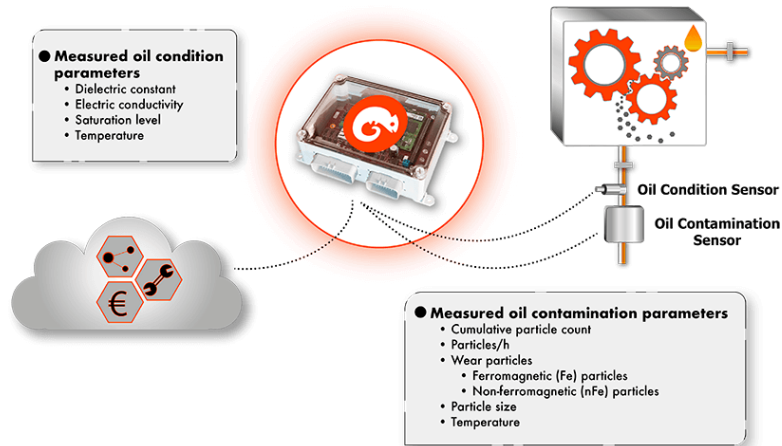

Feed water pumps

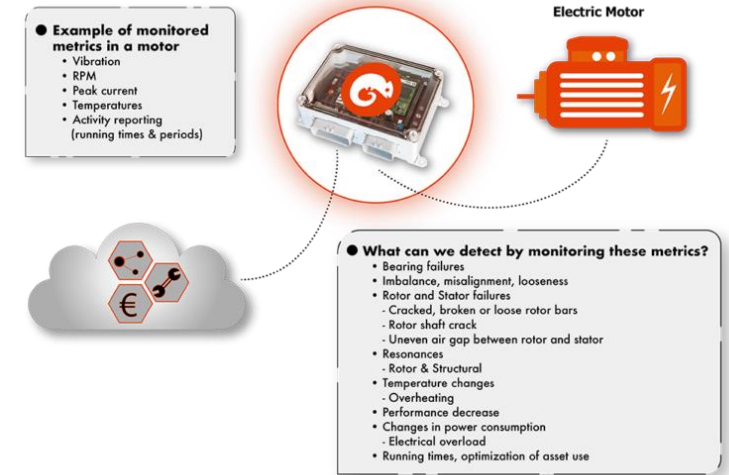

Monitoring concepts – Optional assets

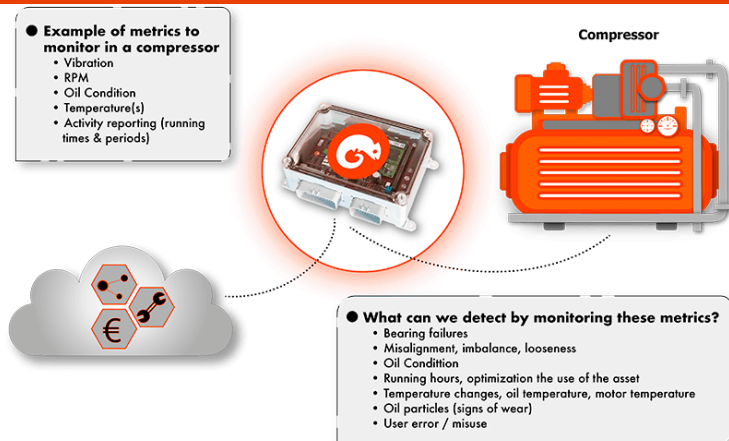

Oil: lubrication & oil contamination

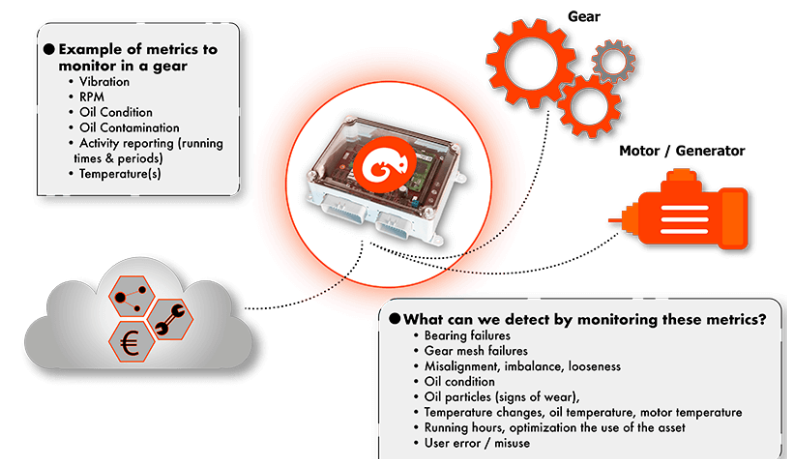

Electric motor / Generator

Compressors

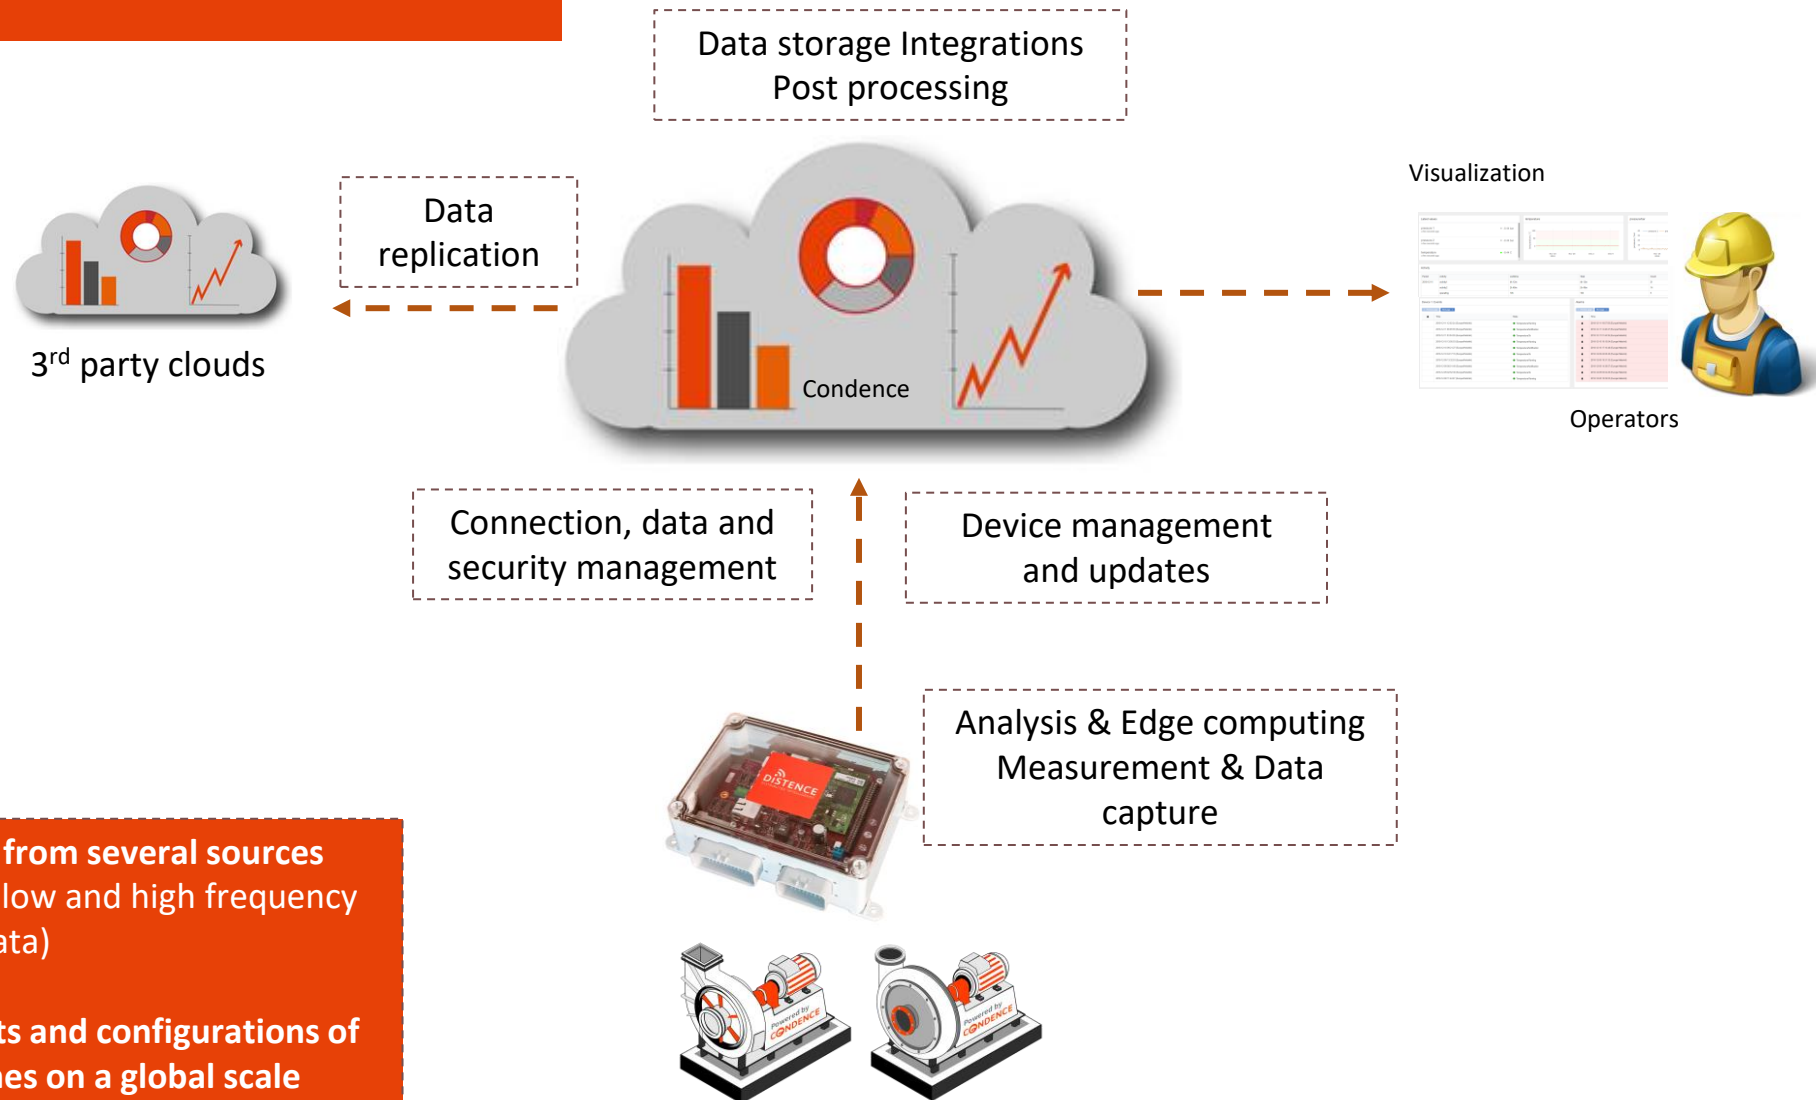

Gearboxes

Technical architecture

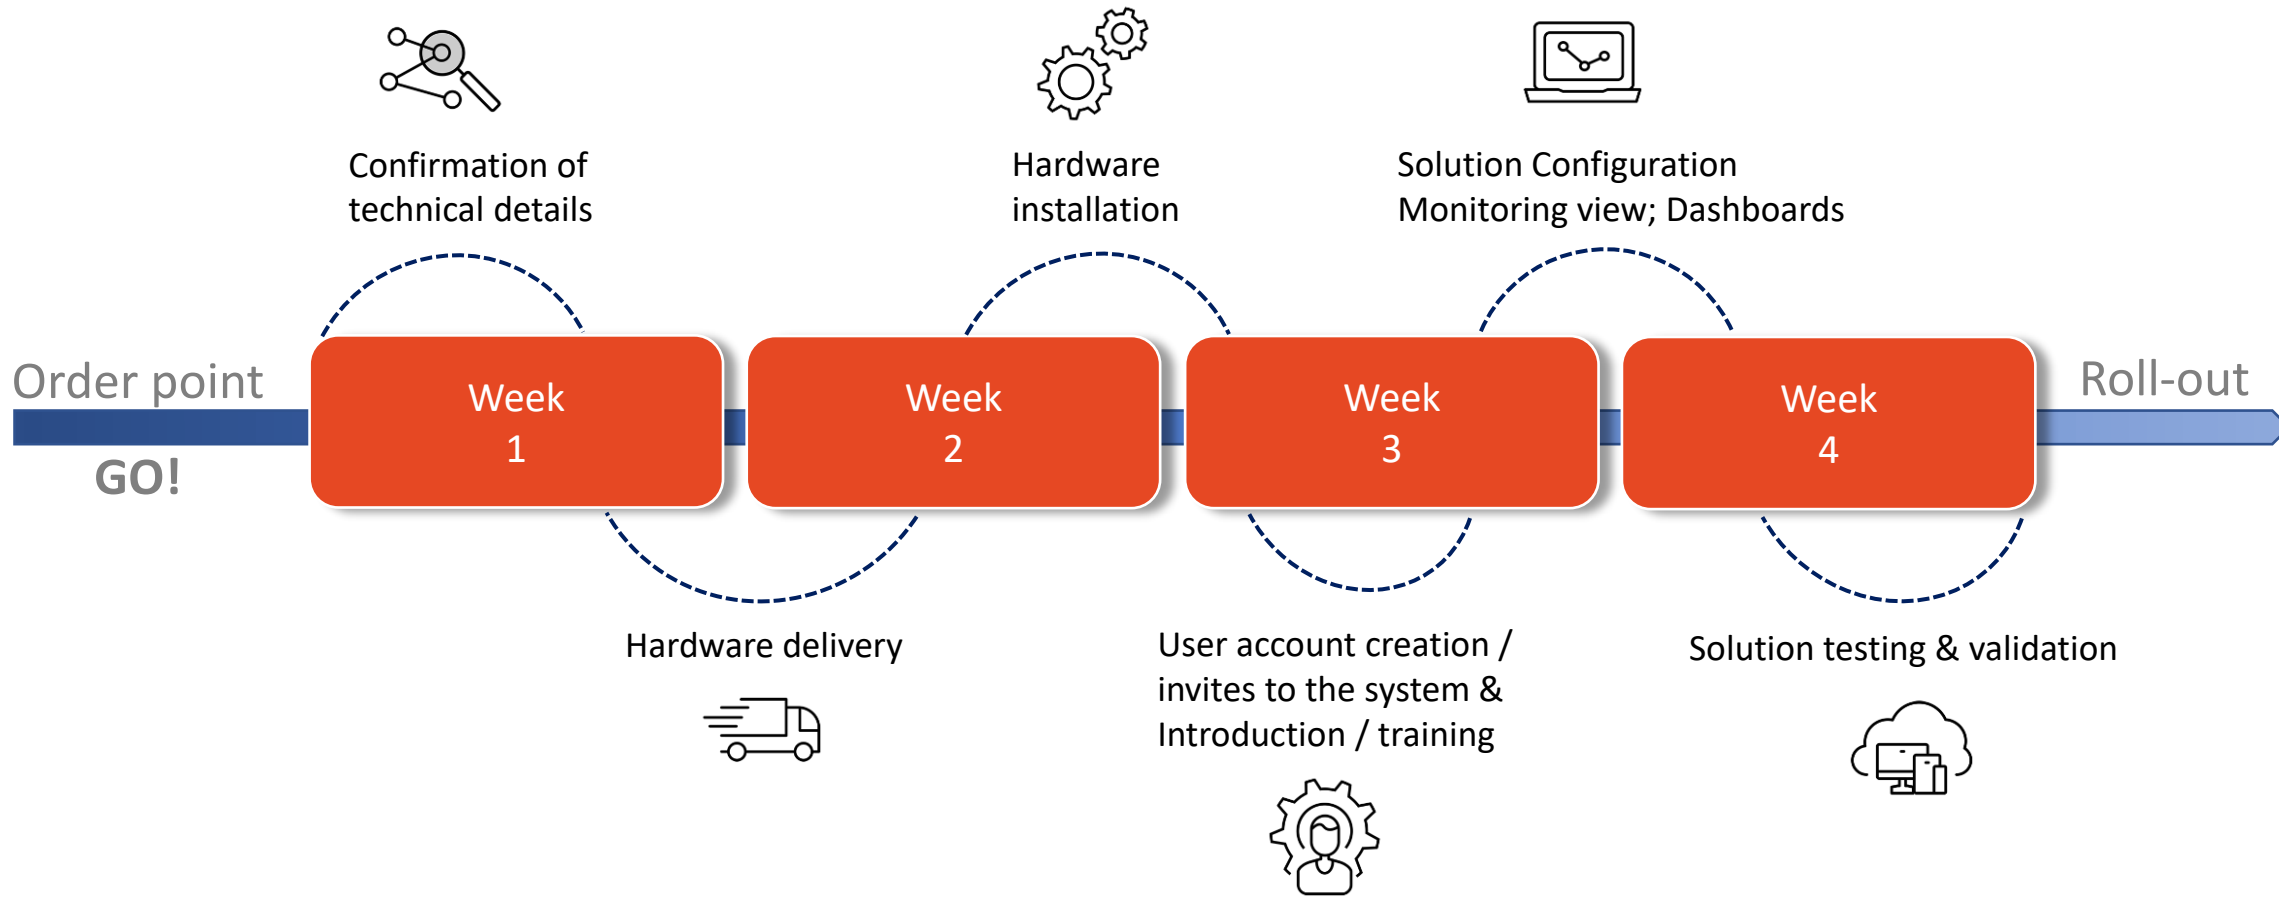

Architecture

Combining analysis from several sources
(analog and digital & slow and high frequency
data)

Management of assets and configurations of
thousands machines on a global scale

Delivery timeline
